

### Task 3: Software Inventory

Recommended Software by Department:

| Department           | Recommended Software                                    | Purpose / Business Justification                                           |
|----------------------|---------------------------------------------------------|----------------------------------------------------------------------------|
| Executive Management | Microsoft 365 (Word, Excel, Outlook, Teams, PowerPoint) | Communication, reporting, presentations, meetings, and document management |
|                      | Zoom                                                    | Virtual meetings with clients and stakeholders                             |
|                      | Trello or Asana                                         | Project tracking and executive task management                             |
|                      | Adobe Acrobat Reader                                    | Viewing and signing PDF documents                                          |
| Finance              | Sage Accounting or QuickBooks                           | Financial management, payroll, invoicing, and budgeting                    |
|                      | Microsoft Excel                                         | Financial reports, spreadsheets, and calculations                          |
|                      | Pastel Payroll                                          | Payroll and employee salary processing                                     |
|                      | Bitdefender GravityZone                                 | Endpoint security for sensitive financial data                             |
| Human Resources      | BambooHR                                                | Employee management and HR records                                         |
|                      | Microsoft Teams                                         | Internal communication and meetings                                        |
| Sales and Marketing  | Canva                                                   | Marketing content and social media graphics                                |
|                      | HubSpot CRM                                             | Customer relationship management                                           |
|                      | Meta Business Suite                                     | Social media campaign management                                           |
|                      | Google Analytics                                        | Website and campaign analytics                                             |
|                      | Mailchimp                                               | Email marketing campaigns                                                  |
| Software Development | Visual Studio Code                                      | Source code development                                                    |
|                      | GitHub                                                  | Version control and collaboration                                          |
|                      | Postman                                                 | API testing                                                                |
|                      | Docker                                                  | Containerized application deployment                                       |
|                      | VirtualBox                                              | Virtual machine testing environments                                       |
|                      | Ubuntu Linux                                            | Development and server operating system practice                           |
|                      | Jira                                                    | Agile software project management                                          |

|                        |                                 |                                     |
|------------------------|---------------------------------|-------------------------------------|
| <b>All Departments</b> | Windows 11 Pro                  | Secure business operating system    |
|                        | Microsoft Defender for Business | Antivirus and endpoint protection   |
|                        | Google Drive or OneDrive        | Cloud storage and file sharing      |
|                        | Veeam Backup & Replication      | Data backup and disaster recovery   |
|                        | Draw.io                         | Network and infrastructure diagrams |
|                        | Slack                           | Company-wide communication          |
|                        | Adobe Acrobat Reader            | PDF viewing and document sharing    |
|                        | Jira                            | Agile software project management   |

## Summary

The recommended software ensures that:

- Each department has tools tailored to its operational needs.
- The company maintains strong cybersecurity and data protection.
- Employees can collaborate efficiently through cloud and communication platforms.
- The Software Development department has professional development and testing tools.
