Servers (70)	192.168.70.0/24	Servers & Infrastructure
Guest WiFi (80)	192.168.80.0/24	Guest Wireless Access

NETWORK DESIGN OVERVIEW	
- Internet connection enters through the ISP. - Traffic is secured through the Router/Firewall. - Core switching is handled by a 24-Port Managed Switch. - VLANs are used to segment departments and improve security and performance. - Servers, NAS, and UPS provide data storage and business continuity. - Wireless Access Points provide secure WiFi access for employees and guests. - Network printers are accessible to authorized users across the organization.	

KEY BENEFITS	
✓ Improved Security (VLAN Segmentation)	✓ Centralized Storage & Backups
✓ Better Network Performance	✓ High Availability with UPS
✓ Scalability for Future Growth	✓ Secure Wireless Access
